

DHANANJAY PANCHAL

AZURE DATA ENGINEER | DATA PLATFORM CONSULTANT

+1 646-525-5093 | dhananjaypanchal99268@gmail.com | linkedin.com/in/dhana7 | Remote | U.S. Eastern Time overlap

OPEN TO PART-TIME | FRACTIONAL | PROJECT-BASED CONTRACTS

PROFESSIONAL SUMMARY

Azure Data Engineer and platform builder with 5+ years across data engineering, analytics, and BI, including 2+ years owning production healthcare data platforms. Architected Exact Benefits Group's Azure estate end to end across ADF, Databricks, Python/SQL, Blob/SFTP/API and webhook ingestion, PostgreSQL/SQL Server, governance, and reporting marts. Delivered multi-million-row workloads - including 2.37M+ book-of-business records and 600,000+ call/status events - while replacing spreadsheet-heavy operations with centralized, reliable data products. Best suited for contracts requiring independent architecture, delivery, debugging, and production ownership.

SELECTED IMPACT

- Loaded 2,370,914 book-of-business records from 21 successfully processed carrier files with source-level deduplication and audit lineage.
- Built and governed ingestion for 600,000+ dialer call and status records used in agent and campaign reporting.
- Integrated 14+ carrier and data-partner feeds and automated 11 carrier-specific processing procedures.
- Unified customer, policy, commission, agent, call, sales, and carrier data across 10+ operational systems.

CORE EXPERTISE

Azure: Azure Data Factory, Azure Databricks, Azure Functions, Azure Blob Storage and Data Lake, Azure PostgreSQL, Azure SQL

Engineering: Python, pandas, SQL, PL/pgSQL, T-SQL, ETL/ELT, data modeling, SCD/history models, stored procedures

Integration: REST and OData APIs, Microsoft Graph, JSON, CSV/XLSX/XLSM, OneDrive, SharePoint, SFTP, webhooks

Reliability: Incremental loads, idempotent reruns, checkpoints, pagination, rate-limit retries, deduplication, reconciliation, backfills

Analytics: Power BI, Tableau, reporting marts, KPI models, Git and GitHub

PROFESSIONAL EXPERIENCE

Exact Medicare / Exact Benefits Group

Ohio, United States / Remote

Data Engineer | Data Specialist

Oct 2024 - Present | Apr 2024 - Oct 2024

- Architected and own EBG's company-wide Azure data platform, unifying customer, policy, commission, agent, call, sales, and carrier operations across 10+ operational systems into governed PostgreSQL and SQL reporting models.
- Built ADF, Databricks, Python, and SQL pipelines for 14+ carrier and partner feeds using REST APIs and Blob/OneDrive/SFTP files; one IFG load processed 2,370,914 rows across 21 files with batch inserts, ID preservation, date safety, source tracking, and duplicate-file controls.
- Ingested and governed 600,000+ dialer call records and status events; implemented time-window extraction, deduplication/upserts, and EST/UTC normalization to support trusted agent and campaign KPIs.
- Hardened 11 carrier-specific policy and commission procedures with canonical customer matching, source-row-independent event linking, deterministic deduplication, policy-master recovery, and history-preserving updates.
- Implemented an Azure Function webhook for Onyx policy events, including signature validation, raw-event persistence, HTTP response handling, deployment troubleshooting, and downstream auditability.
- Built checkpointed incremental and backfill workflows that process only missing dates/files, capture rejected rows, and recover from rate limits, 503s, duplicate keys, timezone shifts, schema drift, and malformed source data.

SELECTED PLATFORM DELIVERY

High-volume file ingestion: 2.37M+ IFG book-of-business rows across 21 successful files plus 29 multi-tab Excel workbooks, with schema alignment, text-safe identifiers, source lineage, and date validation.

API and event ingestion: Azure Function webhooks, Onyx policy/SMS/person data, EnrollHere calls and agent status, Ringba campaigns, MARx batches, and Microsoft Graph file integrations.

Carrier and policy automation: Aetna, Anthem, Cigna, Devoted, Guardian, Heartland, Humana, UHC, UHOne, Wellcare, Zing, AMAM, Liberty Bankers, and additional carrier feeds.

History, recovery, and serving: Row-hash change detection, latest-record models, checkpoint/resume, rejected-row capture, SQL Server-to-PostgreSQL replication, materialized-view orchestration, and reconciliation controls.

EARLIER EXPERIENCE

Con Edison

New York, NY

Analyst, AMI Operations

Sep 2023 - Dec 2023

- Modernized AMI reporting from Excel into SQL and Power BI with 4 daily dashboards, reducing manual reporting effort by 90%+ and accelerating cross-team data exchange.
- Served as the data liaison for operations teams, translating daily reporting needs into SQL-backed dashboards and repeatable processes.

Bright Power, Inc.

New York, NY

Data Analyst

May 2022 - Dec 2022

- Built SQL/Python data pipelines and Power BI reporting for platform and energy data; identified bottlenecks that improved productivity by 60%.
- Analyzed energy-consumption patterns and operational KPIs, producing recommendations that helped clients reduce annual utility costs by 15% on average.

TheRapidHire

BI Analyst

Feb 2021 - Aug 2021

- Built Tableau reports, analyzed 15,000+ survey responses, and supported recurring data-service and stakeholder reporting workflows.

Codiant

Associate Business Analyst

Jun 2020 - Feb 2021

- Converted business requirements into delivery-ready specifications and supported Agile coordination across technical and client teams.

EDUCATION

Pace University, Seidenberg School of Computer Science and Information Systems

New York, NY

M.S., Information Systems / Business Analytics | Merit Scholarship

Aug 2021 - May 2023

Acropolis Institute of Technology and Research

India

B.Tech, Electronics and Communication Engineering

2017 - 2021
